TW40 TORQUE WRENCH

Warrior's TW40 torque wrench is designed for shallow drilling rigs and incorporates a compact design with an integral top-mounted spinner; the wrench can generate 40,000 ft-lbs of breakout torque and can handle 3-1/2 to 7-in tubulars.

The wrench carriage can be custom-built to suit specific rig applications. The wrench is available with remote-controls and is ideally suited for both new build and refurbishment applications.
